

Erigeron annuus L.

Erigeron annuus L. is a common annual weed. It is characterized by its numerous small, white flowers and its ability to grow in a wide variety of habitats. The plant has a dense, fibrous root system and a basal rosette of leaves. The stems are upright and branched, with small, lanceolate leaves. The flowers are arranged in a terminal, branched inflorescence. The plant is highly adaptable and can tolerate a wide range of soil conditions. It is often found in disturbed areas, such as roadsides, fields, and gardens. The plant is a member of the Asteraceae family and is native to North America. It is a common pest of crops and is often found in association with other weeds. The plant is highly prolific and can produce a large number of seeds. The seeds are small and light-colored, and are easily dispersed by wind. The plant is a common sight in many parts of the world, and is often considered a nuisance.
